

Tonka beans absolute

The *Dipteryx Odorata* is a species native to northern Latin America, mainly Brazil, Guyana and Venezuela. From its fruit is extracted the stone which contains the bean, this one after treatment takes its wrinkled and brown appearance and gives off its coumarin smell. The quantity of coumarin contained in the beans is such that crystals form inside.

Our commitments

A natural absolute from the production workshops of Elixens France.

OLFACTIVE NOTES : Powdery, coumarin

TASTING NOTES : Coumarin, vanilla

Main features
